

USB LOCK RP™

Efficiently prevents network information loss due to the unauthorized use of: USB Storage Removable Drives (flash drives, I-pods, mP3, mP4), CD-ROM, CD-RW, Floppy, and Bluetooth transceivers

Without blocking non-storage USB peripherals like: printers, mouse, scanners, keyboards, v cams, etc.

USB Lock RP™ is designed as a two components system

1) USB Lock RP™ (Control) To be installed in a computer or server, from were the restrictions or permissions are managed.

From your USB Lock RP™ Control Center you can:

- Change security measures
- View global security (automatically)
- View and log USB blocked ,and allowed connections
- Receive file extraction Alerts in real-time (New in v2.9)
- Generate global and per machine reports
- Shutdown or re-start any of the controlled PC's
- Uninstall USB Lock RP™ clients

Note: USB Lock RP™ control does not need to run from a server

2) USB Lock RP™ (Clients) Designed to offer active security. USB LOCK RP Clients work as "Windows service" at local machine level. USB Lock RP™ clients run at 0% CPU

For Windows 2000, Windows XP, or Windows server 2003 operating systems

Note: USB Lock RP Clients are Windows Vista compatible (New in v 2.9)
